Brennan M. Caughron
BNSF Railway

Global Level Crossing Safety Symposium - August $5^{\text {th }}, 2014$

## Demand for Passenger Service Upgrades

- New Amtrak ridership record 10 of past 11 years... 31.6 million in FY13
- Amtrak ridership is growing faster than any major travel mode
- Continued interest in increasing the frequency and speed of intercity passenger rail service on shared rail corridors
- Increase passenger trains speed and frequency at grade crossings
- Passenger rail corridor development must be supported by investment in grade crossing infrastructure

## Track Speed and Grade Crossing Upgrades

## Corridor Improvements

Passenger rail corridor involves a series of integrated systems

TRACK STRUCTURE \& GEOMETRY

ROLLING STOCK

SPECIAL TRACKWORK

GRADE CROSSINGS

SIGNALS \& TRAIN CONTROL

## "Go Fast by Not Going Slow..."

## Ultimate Project Selection

## Present Model Scope

## Project Benefits Depend on Boundary Conditions

## Opportunities to Reduce Running Time

- Improvements can be made to address schedule minimum run time and schedule reliability
- Improvement projects have different impacts on both schedule components

## Schedule minimum run time Schedule reliability (uncertainty)

- Infrastructure
- Track structure
- Track geometry
- Signals
- Grade crossings
- Rolling stock
- Acceleration
- Top speed
- Curving performance
- Single vs. double track
- Siding length and spacing
- Capacity utilization
- Existing capacity
- Other rail traffic
- Station dwell
- Passenger delays

## Model Objective Function

## Minimize Total Running Time:

ABD link variable $(1,0)$

$$
\begin{aligned}
& \sum_{n=1}^{N} \sum_{s=0}^{S} \sum_{t=1}^{T} \theta \\
& \text { Trains }
\end{aligned}
$$

Speeds

Acceleration/Braking Delay Segment train speed $(1,0)$

Unit running time at speed 's'
Segment length
Segment specific train
time weight factor

## Model Constraints (1 of 2)

| $\sum_{\mathrm{n}=1}^{\mathrm{N}} \sum_{\mathrm{c}=0}^{\mathrm{C}} \mathrm{x}_{\mathrm{n}, \mathrm{c}} \mathrm{p}_{\mathrm{n}, \mathrm{c}} \leq \mathrm{B}$ | Budget constraint | $(2)$ |
| :---: | :---: | :---: |
| $\sum_{\mathrm{s}=0}^{\mathrm{s}} \mathrm{v}_{\mathrm{n}, \mathrm{s}, \mathrm{t}} \sigma_{\mathrm{s}} \leq \sum_{\mathrm{c}=0}^{\mathrm{c}} \mathrm{x}_{\mathrm{n}, \mathrm{c}} \mathrm{v}_{\mathrm{c}}$ | Train speed < infrastructure speed | (3) |
| $\mathrm{z}_{\mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}} \leq \mathrm{v}_{\mathrm{n}, \mathrm{s}^{*}, \mathrm{t}} \forall \mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}$ | Acceleration and braking link (1) | (4) |
| $\mathrm{z}_{\mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}} \leq \mathrm{v}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \forall \mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}$ | Acceleration and braking link (2) | (5) |
| $\mathrm{z}_{\mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}}+1 \geq \mathrm{V}_{\mathrm{n}, \mathrm{s}^{*}, \mathrm{t}}+\mathrm{V}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \forall \mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}$ | Acceleration and braking link (3) | (6) |
| $\mathrm{l}_{\mathrm{n}}-\mathrm{a}_{\mathrm{n}, \mathrm{t}}-\mathrm{b}_{\mathrm{n}+1, \mathrm{t}} \geq 0 \quad \forall \mathrm{n}, \mathrm{t}$ | Segment acceleration and braking dist. | (7) |

## Model Constraints (2 of 2)

| $\mathrm{b}_{\mathrm{n}, \mathrm{t}} \geq \sum_{\mathrm{s}=0}^{\mathrm{s}} \mathrm{v}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \mathrm{t}_{\mathrm{s}, \mathrm{t}}-\mathrm{v}_{\mathrm{n}, \mathrm{s}, \mathrm{t}} \beta_{\mathrm{s}, \mathrm{t}} \quad \forall 2 \leq \mathrm{n} \leq \mathrm{N}, \mathrm{t}$ | Braking distance | (8) |
| :---: | :---: | :---: |
| $\mathrm{a}_{\mathrm{n}, \mathrm{t}} \geq \sum_{\mathrm{s}=0}^{\mathrm{s}} \mathrm{v}_{\mathrm{n}, \mathrm{s}, \mathrm{t}} \alpha_{\mathrm{s}, \mathrm{t}}-\mathrm{v}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \alpha_{\mathrm{s}, \mathrm{t}} \forall 2 \leq \mathrm{n} \leq \mathrm{N}, \mathrm{t}$ | Acceleration distance | (9) |
| $\sum_{\mathrm{s}=0}^{\mathrm{s}} \mathrm{v}_{\mathrm{n}, \mathrm{s}, \mathrm{t}} \sigma_{\mathrm{s}} \leq \mathrm{h}_{\mathrm{n}, \mathrm{t}} \quad \forall \mathrm{n}, \mathrm{t}$ | Station stopping constraint | $(10)$ |
| $\sum_{\mathrm{s}=0}^{\mathrm{s}} \mathrm{v}_{\mathrm{n}, \mathrm{s}, \mathrm{t}}=1 \quad \forall \mathrm{n}, \mathrm{t}$ | One operating speed per service <br> on each segment | $(11)$ |
| $\sum_{\mathrm{c}=0}^{\mathrm{c}} \mathrm{x}_{\mathrm{n}, \mathrm{c}}=1 \quad \forall \mathrm{n}$ | One track maximum speed on <br> each segment | $(12)$ |

## Train Performance Calculator Constraints

| $\begin{aligned} & \text { O} \\ & \text { D } \\ & \text { © } \end{aligned}$ | $\begin{aligned} & \mathrm{z}_{\mathrm{n}, \mathrm{~s}, \mathrm{~s}^{*}, \mathrm{t}} \leq \mathrm{v}_{\mathrm{n},{ }^{*}, \mathrm{t}} \forall \mathrm{n}, \mathrm{~s}, \mathrm{~s}^{*}, \mathrm{t} \\ & \mathrm{z}_{\mathrm{n}, \mathrm{~s}, \mathrm{~s}^{*}, \mathrm{t}} \leq \mathrm{v}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \forall \mathrm{n}, \mathrm{~s}, \mathrm{~s}^{*}, \mathrm{t} \end{aligned}$ |  |  | (4) <br> (5) <br> (6) |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{z}_{\mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}}+1 \geq \mathrm{v}_{\mathrm{n}, \mathrm{s}^{*}, \mathrm{t}}+\mathrm{v}_{\mathrm{n}-1, \mathrm{~s}, \mathrm{t}} \forall \mathrm{n}, \mathrm{s}, \mathrm{s}^{*}, \mathrm{t}$ |  |  |  |
|  | Speed 'B' <br> Speed 'A' | All other $Z_{2}=0$ | All $Z_{3}=0$ | $\begin{aligned} & Z_{5, \mathrm{~A}, 0,1}=1 \\ & \text { Ali other } Z_{5}=0 \end{aligned}$ |
|  | $\mathrm{Z}_{1,0, \mathrm{~A}, 1}=1$ <br> All other $Z_{1}=0$ <br> Segment 1 | Segment 2 | Segment 3 | $Z_{4, B, A, 1}=1$ <br> All other $Z_{4}=0$ <br> Segment 4 |
|  | ment | Dist | ce | Segment $5\left(1_{5}=0\right)$ |

## Minimum Upgrade Length Constraints

Distance

Distance

## Case Study - Porter, IN to St. Joseph, MI

- One round trip frequency per day
- Route length of 176 mi
- 79 MPH maximum speed
- 44 MPH average speed (good case for improvement)
- Annual ridership 106,662 (FY ‘11)

PERE MARQUETTE

| Class 5 | 90 | Replace 1/3 Cross <br> Ties (wood), 136RE <br> CWR, Surfacing | CTC/AT | S/ATC | | Curve shift, Four quad |
| :---: |
| gate crossings |

## Case Study Input Parameters

- Capital costs from Quandel Consultants (2011)
- Maintenance costs from Zarembski et al (2002)
- Discount rate 5\%, 10 year period
- Equal train running time weights (alpha 1 = alpha 2 )
- Identical train consists for each service (1 loco, 6 coach, 1 NPCU*)
- Acceleration and braking performance from simplified TPC

* NPCU = Non-Powered Cab Unit

## Initial vs. Final Condition (\$45M)

## Service Speeds (\$45M)

## Change in Speed and Segment PV Cost (\$45M)

—Change in Speed -Cost

Present Value Cost (\$M)

## Grade Crossing Improvements

- Improved crossings shown in orange
- Only a subset of crossings are improved corresponding to segments with speed improvement
- Crossings near speed restrictions and unimproved segments do not need to be upgraded, minimizing investment

## Service Running Time vs. PV Cost

## Running Time Reduction vs. PV Cost

## Summary

- Grade crossings and protection devices are one part of the integrated passenger rail corridor system
- Can't view in isolation due to interactions and train performance
- Requires a corridor approach to evaluate benefit of projects
- Optimization can prioritize and target investment for maximum return and suggest appropriate budgets for corridor upgrades
