

CSXT Air Permitting Success – Phosphate Fertilizer Facility

William Karl – Environmental Consulting & Technology, Inc.

Meaghan Atkinson– CSX Transportation

CSX Transportation Inc. (CSXT) and Environmental Consulting & Technology, Inc. (ECT) teamed to successfully combine the air operation permits for two phosphate fertilizer storage and handling facilities into one synthetic minor air operation permit. This paper/presentation discusses how CSXT and ECT combined the major Title V air operation permit at the Newport Terminal and the Federally Enforceable State Operating Permit (FESOP) at the Rockport Terminal into one FESOP for the combined terminals. The combined FESOP achieved the goal of continuing to provide CSXT with maximum operational flexibility while providing for future commercial growth. CSXT and ECT will provide information of how CSXT's Clean Air Act team worked successfully with the regulatory agency to achieve and receive a favorable air permit that includes streamlined permit conditions to ensure compliance with all air regulatory requirements.
