

Topics on Nondestructive Evaluation Series

B. Boro Djordjevic and Henrique Dos Reis, Series Editors

Volume 5

**Nondestructive Testing and Evaluation
for the Railroad Industry**

**Henrique Dos Reis and Christopher Barkan,
Volume 5 Technical Editors**

The American Society for Nondestructive Testing, Inc.

Table of Contents

Preface.....	vii
SECTION 1 – Rail.....	1
Enhanced Nondestructive Testing for the Railroad Industry: Continuing the Search for Improved Safety, Quality, and Cost Effectiveness	3
by J.R. Lundgren	
NDT for the Rail Industry.....	3
The UIC World Executive Council Joint Initiative on Rail Defect Management	6
Dealing With Variables – Improvements in Rail Inspection Methods	19
by R. Clark and M. Shakinovsky	
Railroad Rail Inspection Today.....	20
New Technologies and Applications	29
Elastic Wave Analysis for Broken Rail Detection.....	33
by J. Rose and M.J. Avioli, Jr.	
Methodology.....	34
Experiment	42
Using Neural Networks to Automate the Detection of Rail Defects	49
by D.C. St. Clair, D. Mellor, B. Flachsbart, R. Reed and R.M. Havira	
Data Collection.....	50
Neural Networks and the Detection of Defective Bolt Holes.....	54
Input Features	55
Experiments.....	56
Real-Time Recognition of Rail Structures in the Presence of Interference.....	61
by H.A. Sholl, R.A. Ammar and D.A. Pagano	
Background.....	62
Problem Definition and Requirements.....	65
Solution Model	66
Recognition Model	66
Correlation Algorithm	68
Example Application	72
Summary.....	73
Application of a Risk Based Ultrasonic Test Frequency Scheduling System on Burlington Northern Santa Fe	77
by J.W. Palese and T.W. Wright	
Risk-Based Theory	78
Rail Test.....	84
Application on BNSF.....	85
Results and Benefits.....	87

Fiber-Optic Sensor Technology for Railroad Applications	89
by S.L. Chuang, A. Hsu, E. Young, C. Barkan, R. Reiff, M. Schroeder, D. Williams and T. Johnson	
Rail Break Detection	90
Rail Buckling Detection	93
Train Presence and Speed Detection	95
Fiber Installation on Rail	96
 Use of Magnetostrictive Sensor Technology for Detection of Transverse Defects in Rail	 101
by C.J. Schwartz and G.M. Light	
Experimental Details	102
Results	104
Future Development	105
 Comparison of Conventional and Immersion Ultrasonic Techniques to Assist Development of Ultrasonic Rail Inspection Models	 111
by D. Utrata and R. Clark	
Experimental Approach	112
Results	114
 Quality Assurance of Rails	123
by B. Sladojevic	
Quality Characteristics of Rails	124
Acceptance Investigations	125
Rails Production	125
Investigation of the New Rails	126
Investigation of Rails in Service	129
 SECTION 2 — Wheels	133
 Application of Longitudinal Critically Refracted Waves to Evaluate Stresses in Railroad Wheels	 135
by A.A. Santos and D.E. Bray	
Residual Stresses	136
Problems Related to Wheel Stresses	136
Identification of Dangerous Wheels	137
Basic Theory.....	137
Test Characteristics.....	139
 Considerations in the Ultrasonic Testing of Railroad Wheels	145
by F.J. Sattler	
Standards and Early Warning Bulletins	147
Ultrasonic Considerations	152
Discussion of Results	158
Recommendations	166
Conclusions	169
 Use of Phased Arrays for Ultrasonic Testing of Railroad Wheels	191
by C. Lonsdale and P.A. Meyer	
AAR Ultrasonic Specification.....	193
Theory and Development of Phased Arrays	193
The Phased Array Inspection System for Wheels	195

SECTION 3 – Other Nondestructive Testing Issues	197
Determination of Residual Stresses Using Neutron Diffraction: Tank Car Welds and Rail Slices	199
by H.J. Prask, P.C. Brand, T. Gnäupel-Herold and G.E. Hicho	
Methodology.....	201
Measurements and Results: Skip Weld	203
Measurements and Results: Rails.....	206
Special Techniques for Nondestructive Evaluation of Steel Railway Bridges	213
by D. Nyborg, E. Nyborg, J. Foster, B. Hay and R. Chan	
Experimental Procedure	215
Results	219
Nondestructive Testing and Evaluation of Structural Wood and Wood-based Materials.....	225
by F.C. Beall	
Wood-based Material Properties	228
Basic Properties Sensing	230
Mechanical Property Sensing.....	232
Internal Defect Sensing	233
Adhesive Bonding Sensing	235
Geomonitoring of Railroad Engineering Constructions	241
by V.A. Mansurov, V.I. German and V.H. Hanov	
Kinetic Approaches and Method Application	242
Results and Methods of Failure Process Experimental Observation.....	243
Concept of Geomonitoring Railroad Objects.....	244
Forecasting Characteristics.....	246
Meeting the Training, Examination, and Certification of NDT&E Personnel for the Railroad Industry	251
by D.V. Rypien	
Quality Assurance – Documenting Your NDT Requirements	251
Meeting Training, Qualification, and Certification Requirements	252
Author Index.....	259
Index	261
